

# README

---

## Basic Count (Sec. IV.A)

- **Discription:**Count the number of occurrences of each chunk in a given hash file and generate the database(using levelDb)
- **Normal parse:**To generate a DB:

./Count       

Input the hash file name and path of generated DB. The DB can be used as training set or target set.

## Basic Attack(Sec. IV.A)

- **Discription:**Simulate attack target DB by Training DB, using basic frequency analysis.
- **Parse:**To analyze two DB:

./Attack       

Input the path of training DB and target DB.The DBs are generated by Basic Count.
